Toward Universal Learning: A Global Framework for Measuring Learning is the second in a series of three reports from the Learning Metrics Task Force (LMTF). The UNESCO Institute for Statistics and the Center for Universal Education at Brookings have joined efforts to convene the Learning Metrics Task Force. The overarching objective of the project is to catalyze a shift in the global conversation on education from a focus on access to access plus learning.

BUILDING CONSENSUS ON MEASUREMENT AT THE GLOBAL LEVEL:

Large-scale measurement of learning can be used to:

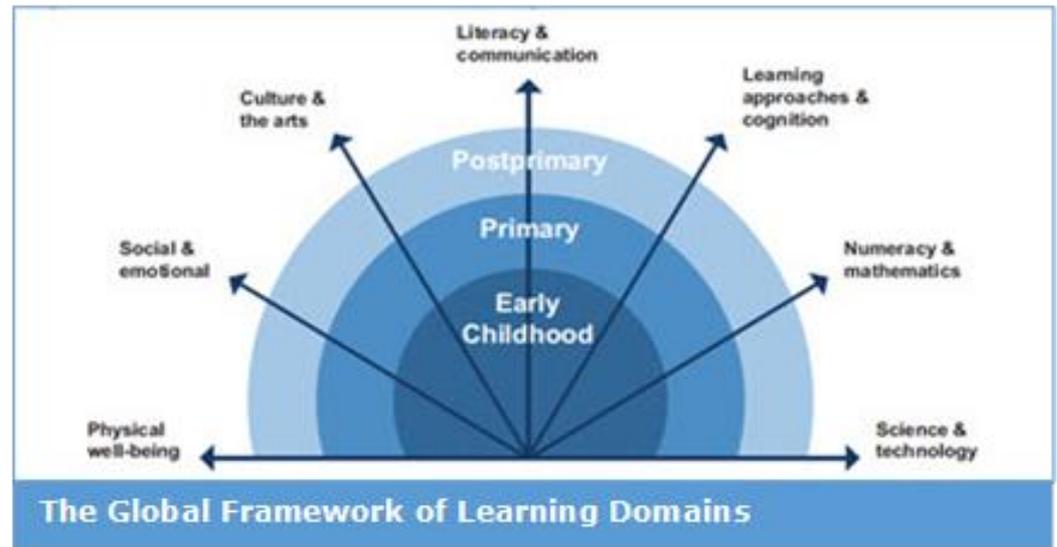

- *Identify and determine the magnitude of potential problems;*
- *Inform interventions; and*
- *Track progress;*
- *Inform parents and the community in general about the status of education and thereby inform public debates.*

Relationship between Classroom, School, Country, and Global-Level Measurement of Learning

A Global Framework for Measuring Learning

- Access to and completion of learning opportunities.
- Exposure to a breadth of learning opportunities across all seven learning domains.
- Early childhood experiences that promote development and learning in multiple domains.
- The ability to read a variety of texts.
- The ability to use numbers and apply this knowledge to real-life situations.
- An adaptable, flexible skill set to meet the demands of the 21st century

Supporting National Capacity and Decision making

Country-Level Communities of Practice: To drive country-level reform, the Measures and Methods Working Group proposed the establishment or expansion of existing communities of practice (CoP) as a mechanism to mobilize stakeholders to improve national assessment systems.

Support from the International Community:

To support country-level CoPs and track progress at the global level, the working group proposed a multi-stakeholder advisory group that would connect countries with resources and technical assistance to help. A possible function of such a group would be to coordinate with regional educational organizations decide which domains to measure, how to measure them and how to implement assessments.

Using Data to Improve Learning Equity

All children and youth should have equal opportunity to learn the skills and knowledge required to succeed in school and life, regardless of:

- the country in which they were born;
- the community in which they grow up;
- their gender;
- their family's income level; and/or
- their physical or mental health status.

Beyond School-Based Metrics

As learning takes place both inside and outside formal school settings, household-based assessments with sound sampling and testing procedures would ensure that learning levels of out-of-school children are measured and taken into account.

Considering Multiple Methods

Regardless of which methods are used, measurement should be conducted in a technically sound, robust manner. Weak data can be misleading and result in the misalignment of policies and resources. The task force decided that it could not recommend a global goal for learning that would require countries to buy into a specific brand of assessment.

Education and the Global Development Agenda

The objectives of the LMTF include ensuring that learning is included in the post-2015 development framework and proposing indicators that can be used to track progress toward the global goals to be identified through the post-2015 process.

Conclusion and Next Steps: *Measuring learning outcomes is a crucial step in ensuring that every child, everywhere, is able to realize their right to good-quality education and become a productive global citizen. Education is everyone's responsibility, not solely that of the government. Therefore, the measurement of learning outcomes must be led and supported by everyone who has a stake in ensuring that all children learn in addition to government, including students, teachers, parents, civil society, the private sector and a variety of other actors.*
